Did you know?

Indoors, outdoors, and everywhere in between. STEINEL has it all.

STEINEL is committed to providing a comprehensive catalog of products to empower you to help your customers build the lighting controls solution they need for any project.

Outside of stand alone and digital sensors and controls, STEINEL designs power packs, outdoor motion sensors, fixture integrated sensors and a wide variety of accessories.

STEINEL is everywhere.

CONTROLS

Our comprehensive controls portfolio

FIXTURE INTEGRATED SENSORS

STEINEL integrated sensors are installed in the lighting fixture itself and utilize HF electromagnetic waves to detect occupancy. This technology enables the sensor to see through many materials (including glass or plastic), allowing for esthetically pleasing design without compromising sensor performance.

ACCESSORIES

STEINEL accessories are engineered to enhance the functionality of every sensor we make. From adjustable time delay and sensitivity settings to innovative lighting control solutions, these accessories allow you to fine-tune and optimize the performance of your sensor system. Our Smart Remote (pictured) is perfect for programming our Control Pro Series with easy integration with our mobile app.

OUTDOOR MOTION SENSORS

STEINEL outdoor motion sensors are built to withstand even the harshest weather conditions, ensuring reliable performance year-round, rain or shine, snow or heat. Their weatherproof design and durable construction make them perfect for outdoor environments, offering long-lasting protection and consistent operation.

POWER PACKS

An unsung hero, power packs ensure a steady, reliable source of energy for your connected lighting controls or plug loads. STEINEL power packs come in a variety of sizes and capabilities to complement your installation.
