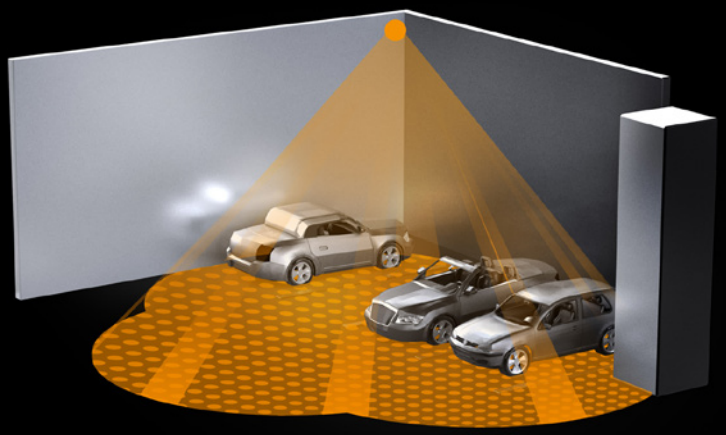
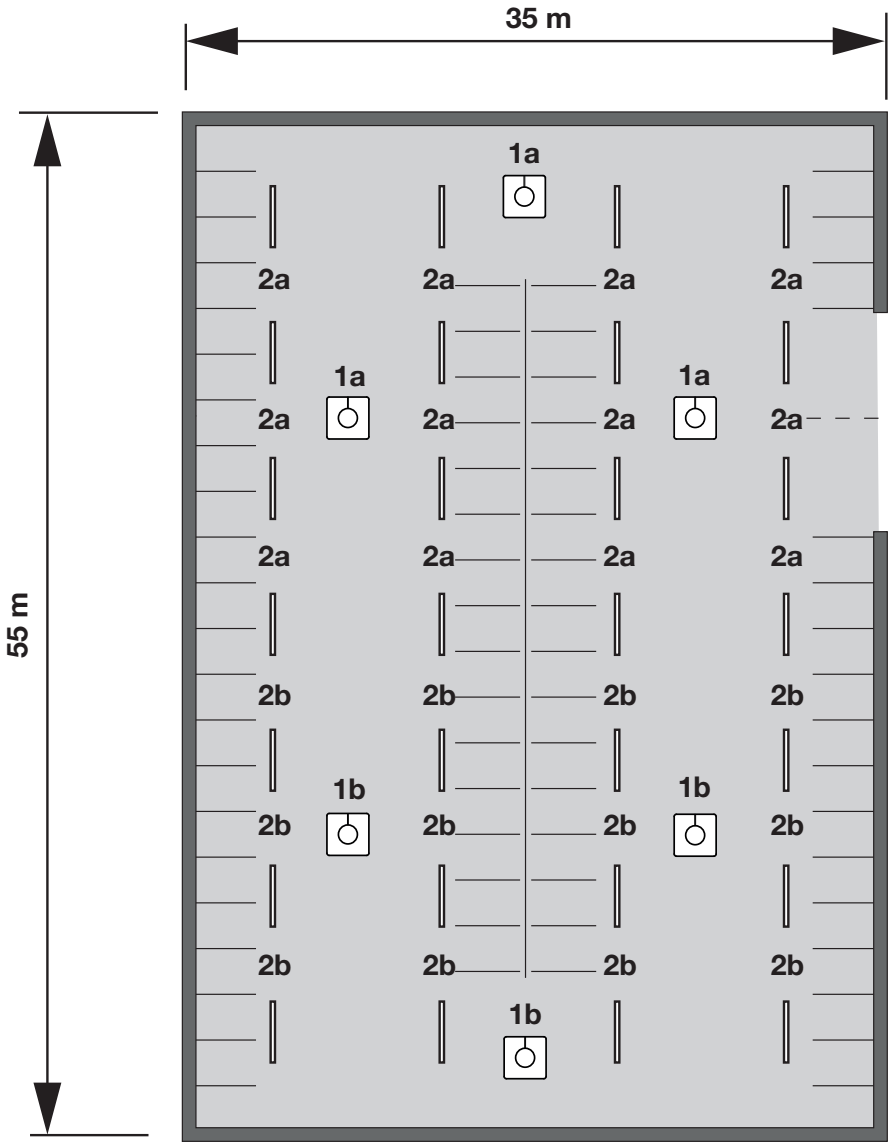
Planning example for multi-storey car parks

Intelligent sensor technology for more efficiency

STEINEL PROFESSIONAL

Motion Detector
IS 3360





This is how it works

The motion detector (1) controls light (2) in the multi-storey car park in relation to movement and ambient light level.
Large areas need to be provided with efficient coverage using just a few sensors.
With a detection zone of up to 1,000 sq.m., the IS 3360 is the ideal detector for this type of application.
