Case Study

Digital Control Solution
Easy to install. Easy to program.

Challenge:

Steinel America needed a pilot location for their new Digital Control Solution product line and their North American headquarters needed an update. With lighting that functioned mainly in an ON/OFF capacity and was separated by rooms vs. zones, a portion of the building needed improved coverage.

Solution:

Installing Steinel's DCS allowed for sensors with a smaller coverage pattern to properly cover the space and open the lighting capabilities to be used as they are intended. It was also an opportunity to serve as a pilot location for their new product line.

"Installation of DCS was very easy and fast. Our electricians completed the work in about 3 hours with no difficulty. The most important part for them was not having to crimp CAT 5 cables."

Pouria Niknam
Sales Operation Manager
Steinel America

Key Benefits:

- Better coverage
- 3 zone / room capabilities
- Monthly energy savings
- IECC 2018 code compliant
- Easy to install and commission
- Partial ON and basic ON/OFF/DIM
- Daylight responsive control
- Utilize the features and functions needed
- Two-wire data bus, no CAT 5 cables
